AERO COIL KITS

The L.W.T. 10 Kit

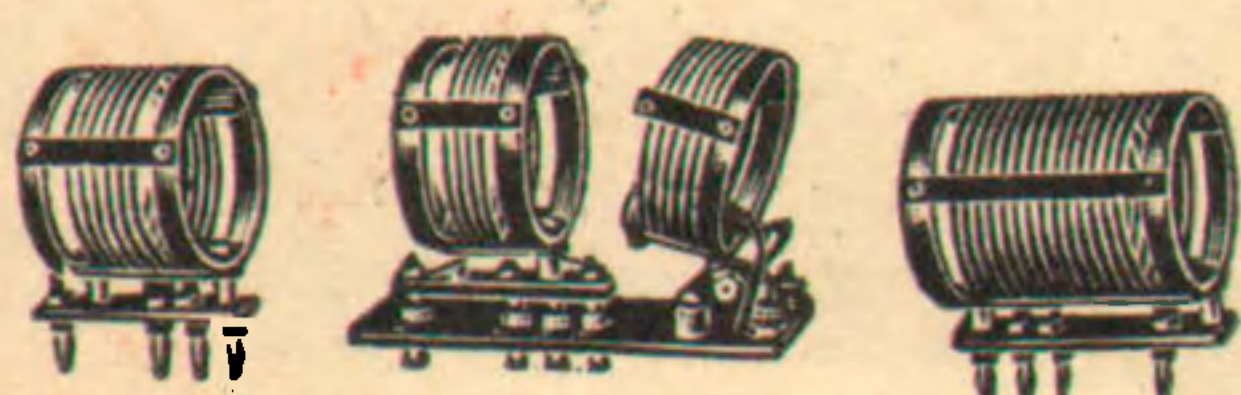

If you wish to purchase only the Aero Coils for the Aero International, order the L. W. T. 10 Kit. The price is \$10.50. These coils are designed to be used with our foundation unit.

The L.W.T. 11 Kit

If you prefer to furnish your own foundation unit for the Aero International, order the L. W. T. 11 Kit. The coils are the same as in the L. W. T. 10 Kit, but a mounting strip is provided. The price is \$11.50.

The L.W.T. 12 Kit

Here are the newest Aero Coils. They are small in diameter, providing a much smaller external field, a better shape factor and improved efficiency. The Kit consists of three Aero Interchangeable coils and base mounting with Primary Coil. Price, \$12.50.

The AERO INTERNATIONAL

Here is a receiver designed to work the greatest possible distance with the least possible tuning troubles, and which can be built for the most reasonable price compatible with the use of the finest parts throughout. No expensive and troublesome shielding is required, and only one coil need be replaced to QSY between bands.

Sensitivity has been increased, control has been made far easier and receiver noises have been reduced to a minimum. Newly designed parts have been incorporated throughout, including Aero Coils of a smaller diameter, having a much smaller external field, a better shape factor and improved efficiency. The tuning condenser has no metal-to-metal bearing to cause noises and the isolation of the antenna from the tuned stage means that swinging of the antenna will have no effect on tuning.

Order the Complete Kit

You can easily assemble the Aero International. All parts are supplied in one Kit, and the foundation unit comes with holes already drilled, assuring ease of construction and proper placement of all parts. Ask your dealer for the Aero Complete Kit No. 8. If he can't supply you, write direct to us, giving dealer's name. The price of this Kit is \$55.30.

FILTER CONDENSERS

Good filter condensers that can be relied upon to stand the voltage at which they are rated are hard to find. In fact, it is absolutely necessary for the protection of the buyer that he buy a condenser that has an adequate guarantee. We offer two such here and if they are used at the rated voltages and should break down we will replace them free of charge provided that they do not show evidences of abuse.

Gentlemen:

I believe my experience in the short wave field should be of great interest to you. My first attempt at building a short wave receiver was with the parts made by * AJAX. At the time I thought it was as good as could be expected. I gave it to my nephew, then built a 3 tube Karas 'Round-the-World'. Here was a receiver so far better than my first that there was no comparison. Imagine picking up Chelmsford, England, eight nights in succession with almost flawless reception besides stations all over the world. I am not a set builder, but I showed it to a friend and he became so enthusiastic about it that I sold it at a profit of 100%. Then I built a 4 tube of parts made by * AJAX but it did not have the kick. I tore it down and did the job all over using a new circuit exploited by one of the magazines, again with indifferent results. Sent it to the junk pile and then I purchased another Karas 'Round-the-World', and it duplicated the performance of my first Karas.

Neither will a tempting offer induce me to sell my Karas nor will I be lured away from it. I'm no professional set builder; I build only for my own amusement and pleasure. Unquestionably, its remarkable performance is due to the splendid parts which only Karas makes. When I look upon a Karas condenser and compare its magnificent workmanship with any other condenser on the market, I cease to marvel at the remarkable performance of the Karas 'Round-the-World' Short Waver. It just couldn't do otherwise. And when it comes to dials, the Micrometric has no close rival for short wave work. I have a pile of dials of every conceivable kind and shape, and I've given them all a fair trial, but no more experimenting with dials. I doubt if a better dial will ever be made than your Micrometric.

I have used your audios since they were first marketed and occasionally jumped to "greener fields" and tried other kinds, but always come back to the Harmoniks because they are so dependable - always on the job.

I didn't intend to write such a lengthy letter but when I get on the subject I simply bubble over with enthusiasm and I think that boquets in life are more appropriate than they are after death. A manufacturer of a worthy product is entitled to a friendly pat on the back - so there it is and may you live long and always stick to your ideals of quality radio parts.

Yours truly,
AJAX BATTERY PRODUCTS CO.

President.

Karas "Round-the-World" Short-Wave Receiver

Short-wave has opened up new fields to the radio explorer. The thrill of receiving Europe, Asia, Africa, Australia—the many far-off places of the earth—is ever at the command of the short-wave fan who uses the remarkable Karas short-wave circuit. Keeping in touch with world fairs, ships at sea, expeditions, etc. gives it a fascination unknown to ordinary broadcast reception.

The Karas receiver is built up entirely of precision parts and is of the latest, proved design. Karas orthometric condensers separate all adjoining wave-lengths by equal distance. The vital, harmonic-carrying side-bands are thus retained. Karas Harmonik Transformers are the

acknowledged world's standard, assuring great volume and purity of tone. Karas Micrometric dials, with a gear ratio of 63 to 1, are five times more efficient than the usual type of dial. The Short-Wave plug-in coils have a range from 15 to 133 meters, the various wave ranges being covered by separate coils.

Precision instruments and correct engineering make the Karas "Round-the-World" Short-Wave Receiver the standard receiver for amateurs.

1929 MODEL AMATEUR WAVEMETER

Type 558 Amateur Band Wavemeter
Price \$20.00

THE new regulations going into effect January 1, 1929, narrowing the amateur bands, will render the use of a wavemeter of precision, heretofore unavailable to amateurs, imperative. The type 558 Amateur Band Wavemeter has been developed particularly to enable amateurs to comply with the new regulations.

The type 558 Amateur Band Wavemeter is so designed that each coil covers one of the amateur bands. The space between the bands is not covered. This permits spreading each band over the entire condenser scale, permitting close setting, reading and calibration.

The accuracy of calibration is 0.25%, the same as for the type 224 Precision Wavemeter, costing ten times as much.

Coils are provided for the 5, 10, 20, 40 and 80 meter bands. A mounted calibration chart is supplied with the instrument. The Wavemeter is furnished in a strong wooden box with racks for the coils when not in use.

U. S. Radio Regulations

Under Section 2 paragraph d of Article 14 of the International Radiotelegraph Convention, Washington, 1927, call signals of amateur stations shall consist of the letter or letters indicating nationality, and a single figure followed by a group of not more than three letters.

The letter "W" will precede all amateur calls for stations within the Continental limits of the United States, and the letter "K" all such calls for stations in the insular possessions and Alaska. After October 1, 1928, the prefix **MUST** be used at all times, for working both U. S. and foreign amateurs.

Amateur stations are not authorized to broadcast news, music, lectures, sermons or any form of entertainment, **OR TO CONDUCT ANY FORM OF COMMERCIAL CORRESPONDENCE**. They are not permitted to communicate with commercial or government stations unless authorized by the licensing authority, except in an emergency or for testing purposes. This does not apply to small pleasure craft holding limited commercial licenses which may have difficulty in establishing communication with commercial or government stations.

No person shall operate an amateur station except under and in accordance with an operator's license issued to him.

IMPORTANT—Operators are reminded that licenses may be renewed, and should be renewed, **BEFORE** the date of expiration. Don't wait until a month after your ticket is dead before writing the Supervisor. Operator licenses may be renewed 30 days before they expire. **IT IS ILLEGAL** to move your station to a new location and operate from there without having your station license changed by the Supervisor's office. Anything you do not clearly understand, write a letter about it to the S. R., who will be glad to help you.

Many U. S. A. stations are still being logged below NAA and above WIZ, operating outside of the legal amateur bands. If you log stations out of the bands, beyond the dial settings of the two stations mentioned above, please write down the call, station called, date, time, position on dial, etc., and send it to the Supervisor of Radio of that district. There is small excuse for amateur stations being beyond NAA and WIZ, and the sooner this is done away with the better it will be for all amateur radio.

Please report to 9FO, or to the Supervisors of Radio, any definite information regarding use of false call signals by amateur stations. There is entirely too much of this kind of stuff on the air at the present time, for which there is no more excuse than for operating in commercial and naval wave bands.

Great Britain

After October 1, 1928, every licensee of a transmitting station **MUST** possess a frequencymeter (wave-meter) of the piezo-crystal or other approved type, and must take all practical steps to maintain its accuracy.

Wavelengths allotted under the old licenses will be withdrawn, and these new bands assigned: 1740-1970kc (173.2-152.2m), 7050-7250kc (42.53-41.35m), 14060-14340 (21.32-20.91m), and under special circumstances: 28100-29900kc (10.67-10.03m) and 56150-59850kc (5.34-5.01m).

Pure CW and phone are permitted. **USE OF RAW UNRECTIFIED AC IS FORBIDDEN**. Use of ICW only where special justification is shown.

Messages regarding experiments and personal messages of an unimportant character will also be allowed within certain limits. Acceptance and transmission of messages for third parties, or of any message on payment, in cash or in kind, is expressly forbidden.

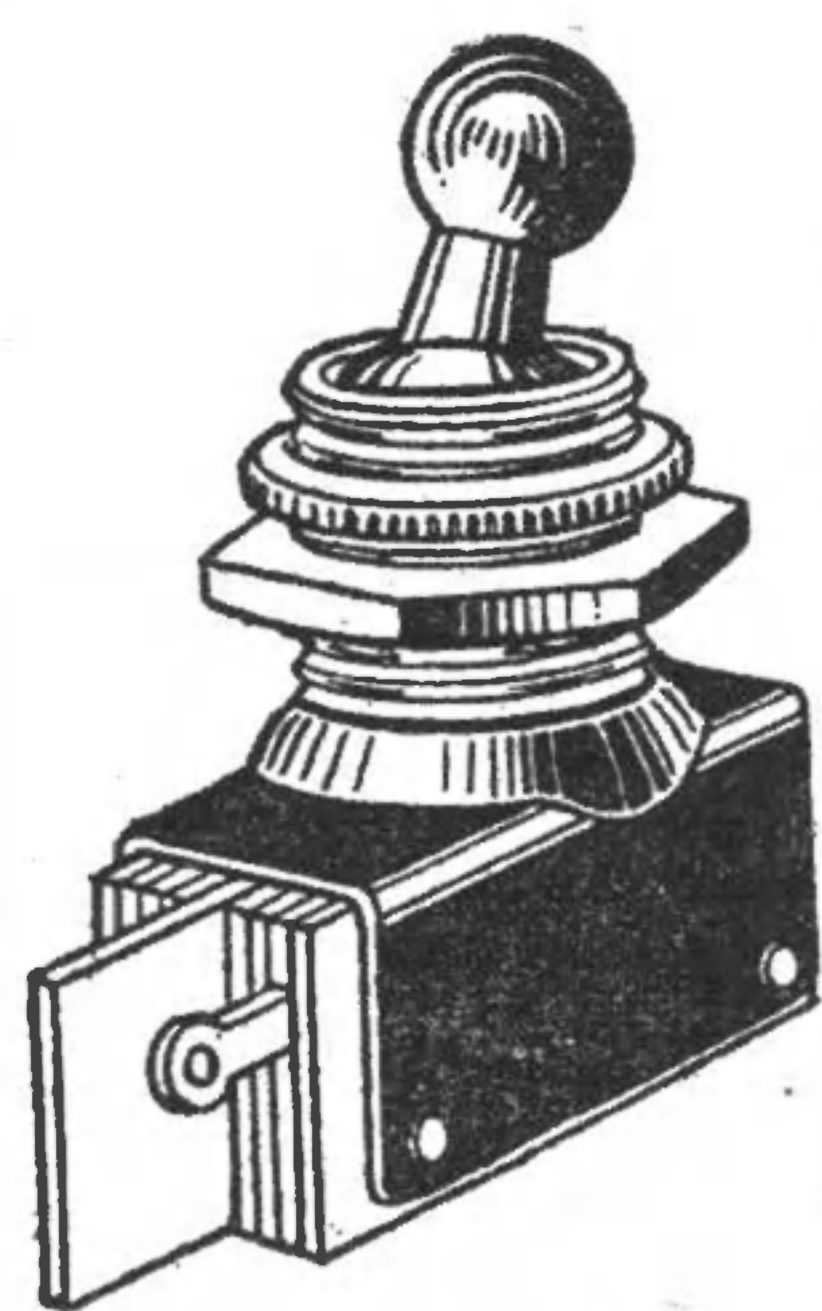

Prefix "G" ("GI" Northern Ireland) must always be used with the call. Use of "CQ" is forbidden, but reasonable use of "Test de G5LF," etc., permitted.

QRA SERVICE

As announced in the previous issue, 9FO claimsto have the most up-to-date file of amateur calls in existence. For new calls you need, send either to 9FO direct, or thru the A. R. R. L., R. E. F., R. E. P., A. R. I., W. I. A., Reseau Belge, S. A. R. R. L., all of whom will forward requests for QRA's.

WHO'S WHO ON THE SHORT WAVES

Due to the change in U. S. commercial calls, and new frequency assignments after October 1, 1928, we are omitting this section in the present issue. "Who's Who" is being revised for inclusion in future issues. Ask W9FO for frequencies of stations wanted.

U. S. Postal Rates to Foreign Countries

Here is the information that you have wanted many times, when sending out QSL cards. Would you like to see a list giving rates FROM each country, in pence, francs, centavos, etc. 9FO will be glad to make up such a list, if the gang want it. QTC?

U. S. AIR MAIL

The postage rate is 5 cents for the first ounce, 10 cents each additional ounce, to those countries having a two cent postal convention with the United States; to all other countries as follows, in addition to the rate given above, 3 cents for the first ounce and 1 cent for each additional ounce. Articles will not be dispatched by Air Mail unless the entire postage is prepaid and they must be plainly endorsed "Via Air Mail."

In Sweden, the delivery by special messenger is limited to places served by city carriers. In other localities delivery is effected by special messenger if possible, otherwise the addressee is notified by telephone or in some other way of the arrival of the articles so he may call at the post office for them. International Intermediates

These will doubtless be in force until 1929, when they will be replaced by a new system of international Prefixes. See page 124, this issue.

QRU—means—I have nothing for you. No longer used as a question.
QSB?—means—YOUR TONE IS BAD! NEVER say "QSB DO." Correct way is: "ur tone DO," or use new TONE system proposed above.
QTO?—means—Have you anything for me? DO NOT use "QRU?"
QTO—means—I have something (message) for you. (See QRU.)
QTZ?—means—Are you using Crystal Control?
QTZ—means—I AM using Crystal Control.
Let's have opinions from the gang regarding this one:
QWV?—What is MY wave? (Answer: QWV—YOUR wave is meters.)
Do YOU like it or not?

720 SCREEN GRID SIX

The Year's Biggest Value!

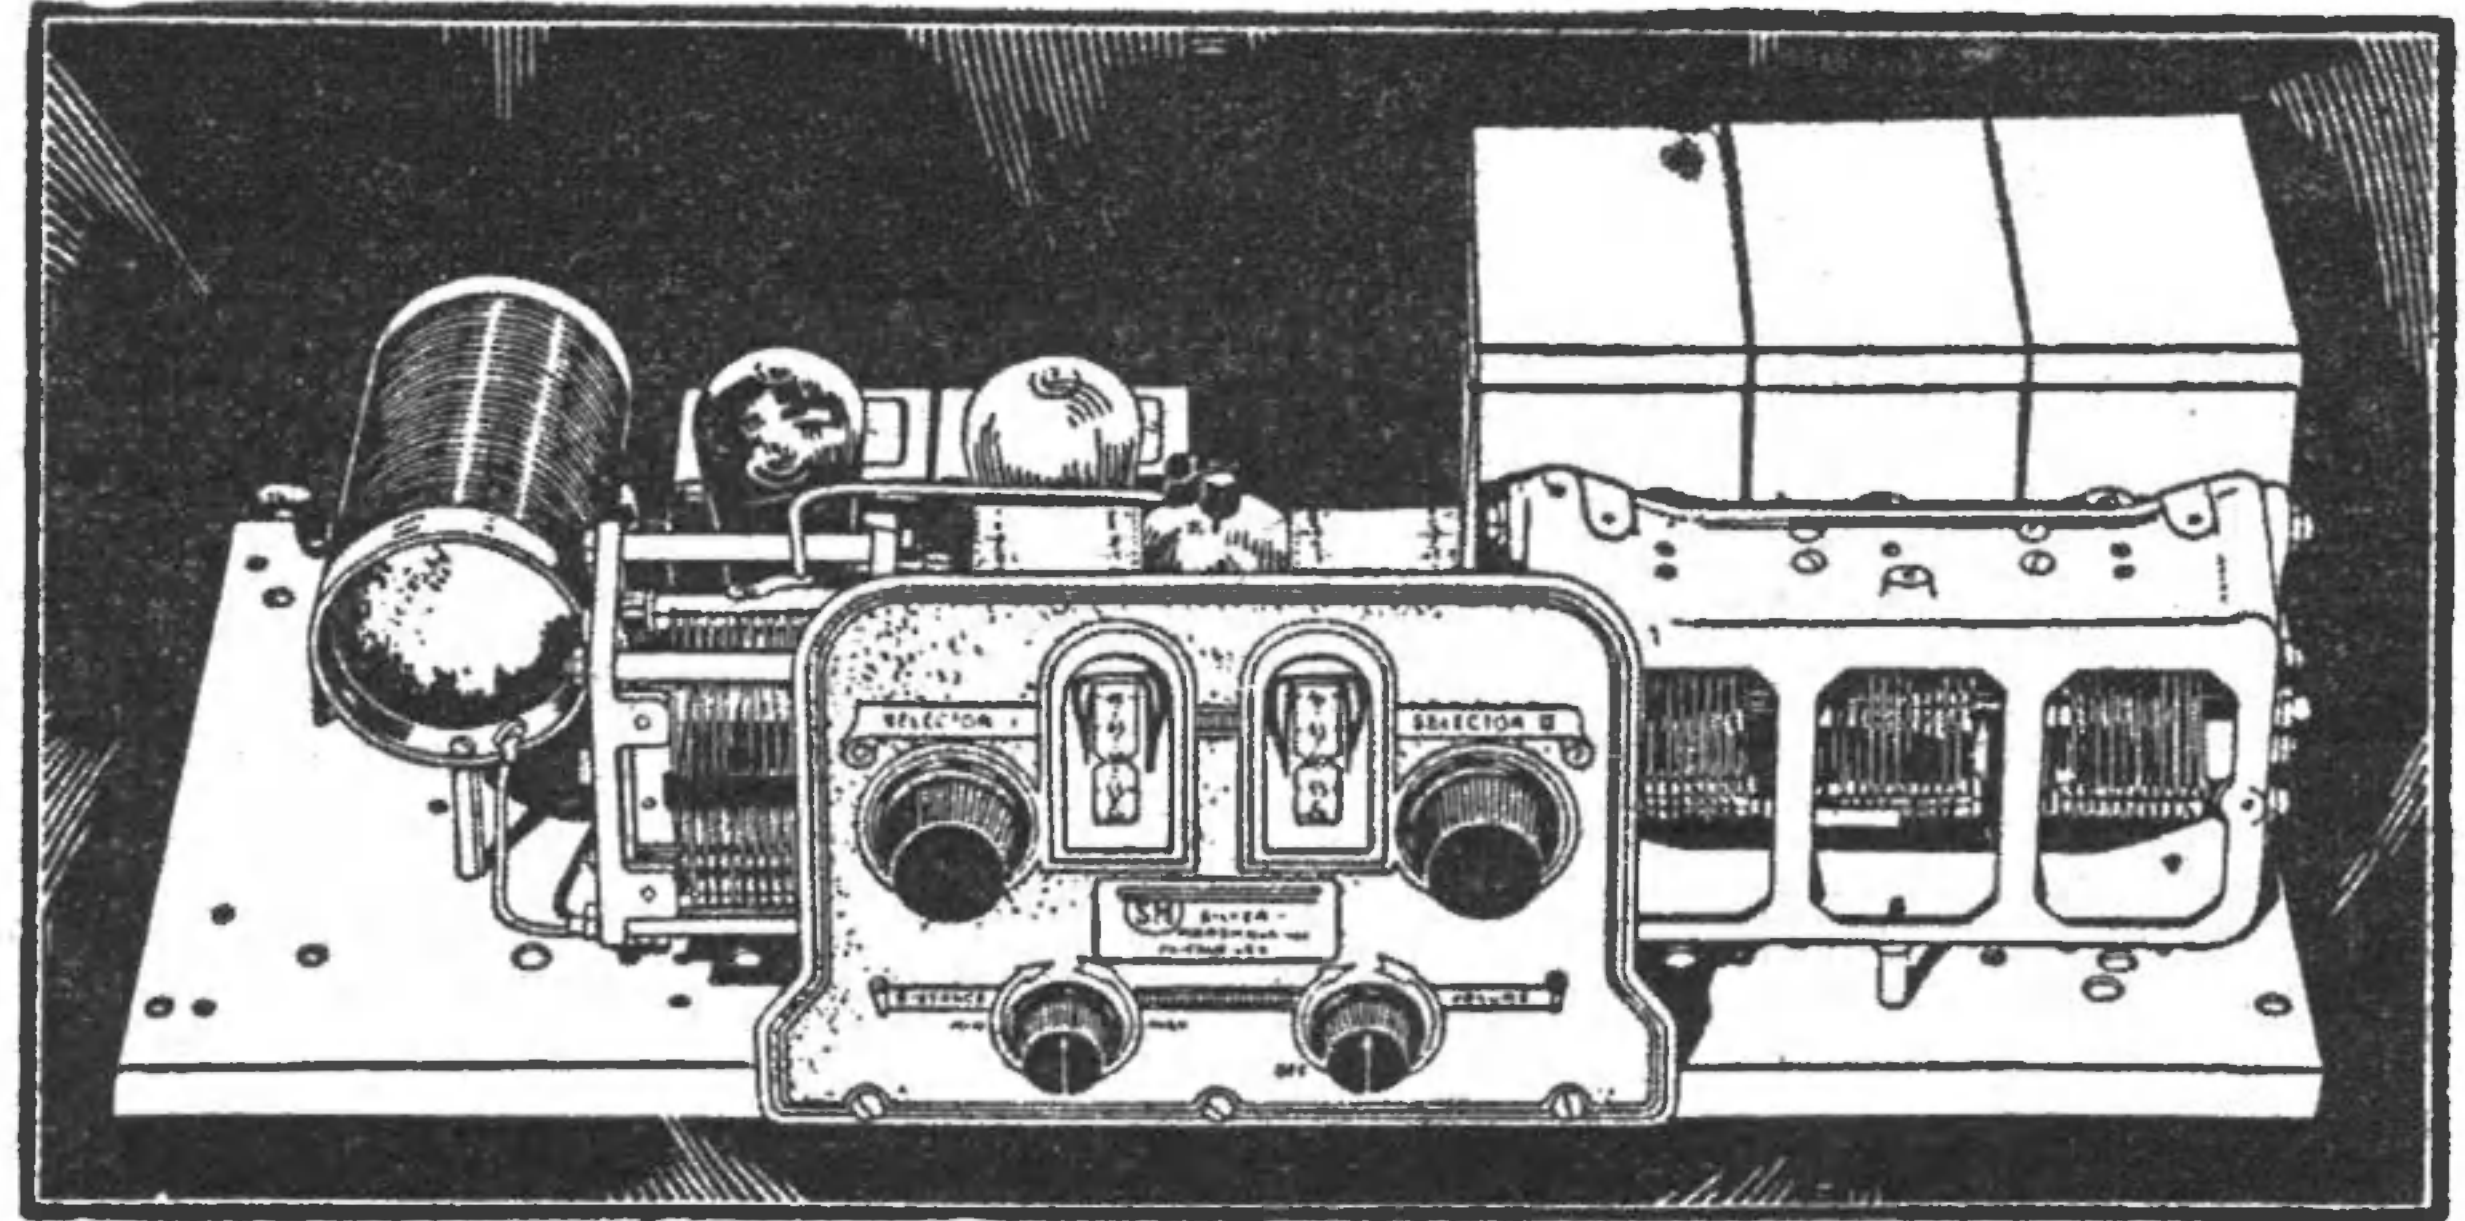

OF ALL the radio sets the S-M Laboratories have ever tested, of all the sets that have borne the S-M endorsement in the last four years—yes, of all these and more—we believe the new 720 Screen Grid Six to be the finest all-around set of them all.

That's a man-sized recommendation. And you can bet it's some set when S-M gets squarely behind it and tells you that you'll find the biggest radio value today in this new Screen Grid Six. This is as it should be, for the new receiver is a simplified and improved design of the Shielded Grid Six that took the country by storm this past winter and spring—the only receiver that anyone ever dared to offer with an unqualified guarantee of absolute satisfaction or your money back! And now S-M tells you that the new Screen-Grid Six is an even better set!

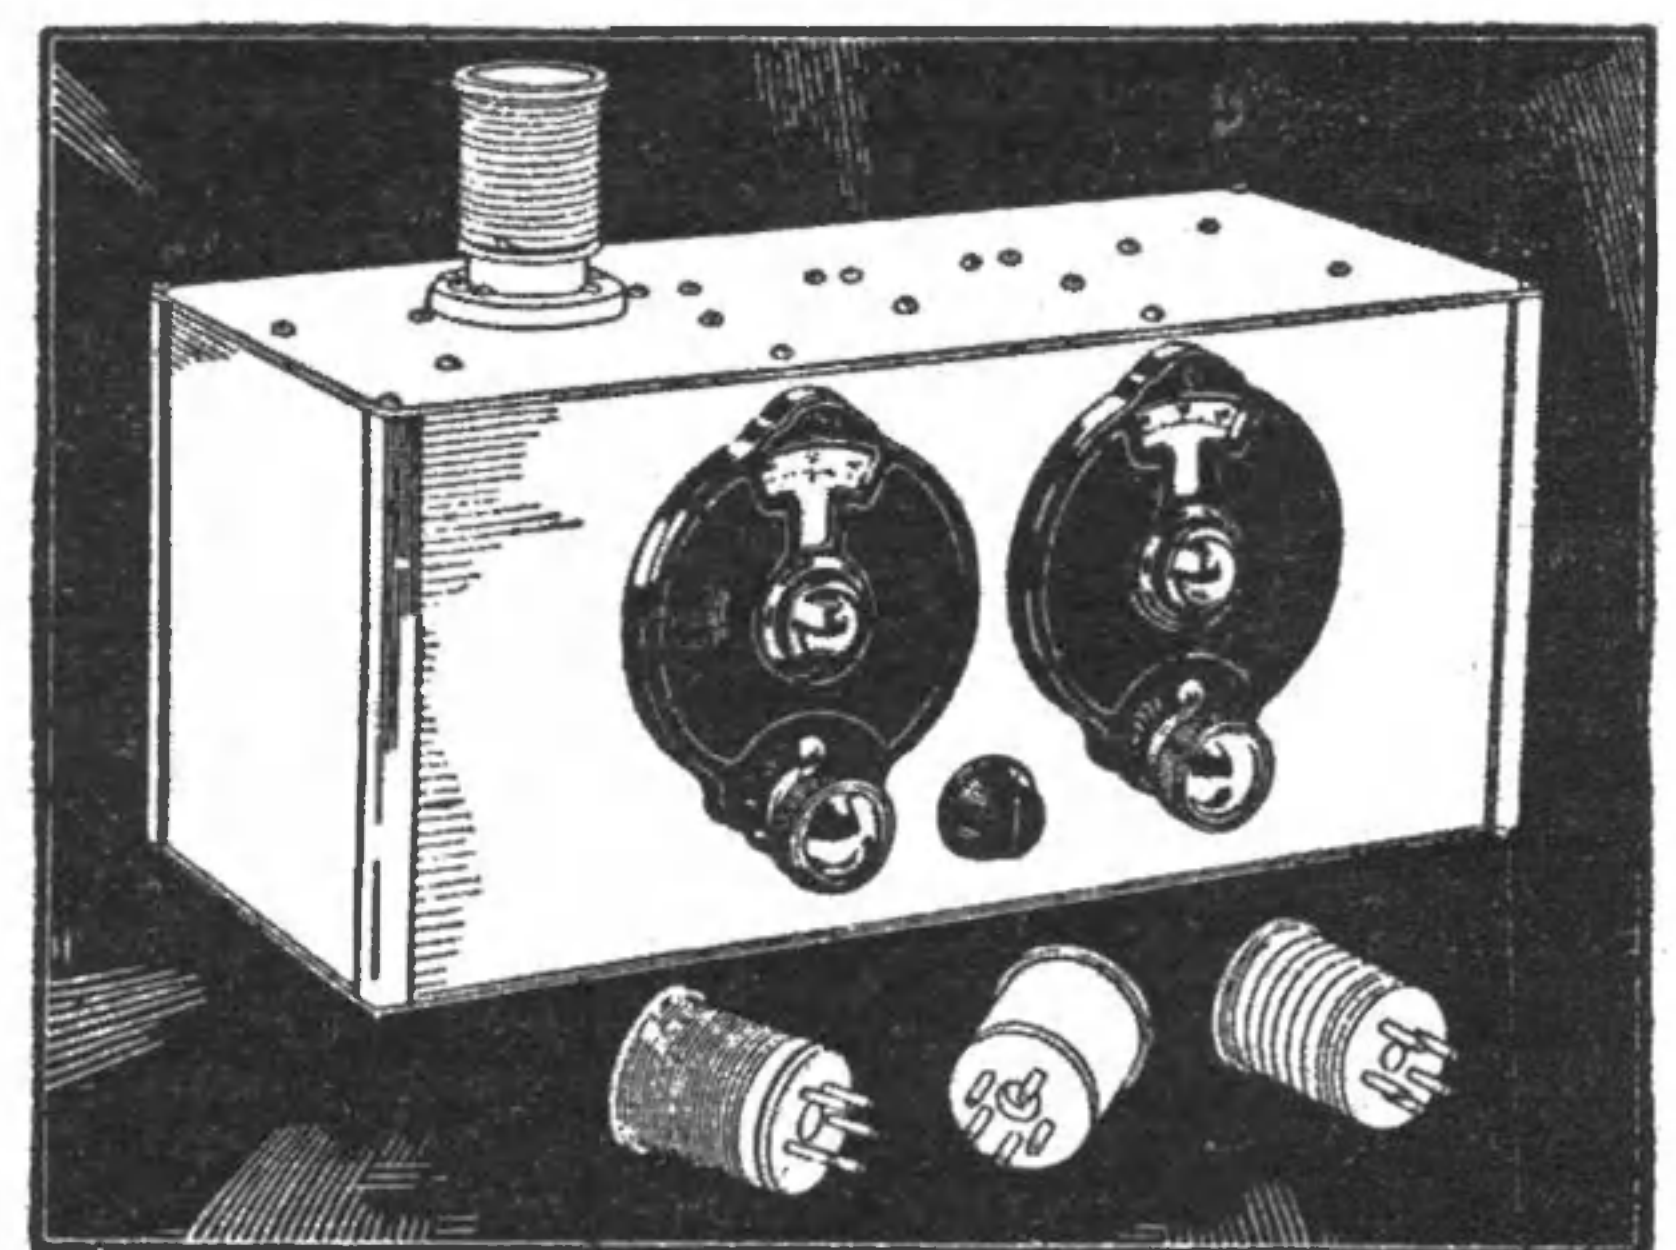

It's the kind of a set you can build in an evening, with its pierced metal chassis and positive fitting assembly. And the thrills begin when you put it on the air. Station after station will come in with local volume, you'll really find positive 10 K.C. selectivity; and tone—well, like those who have tested it already, you just won't be able to help sitting back and telling the world "Baby, that's a radio set." Three stages of tuned, shielded screen-grid R.F. amplification, a detector, and two stages of the new S-M audio transformers that took the RMA Trade Show by storm—two vernier drum dials in a beautiful antique brass control escutcheon, individually copper-shielded R.F. circuits, a rigid die-cast gang condenser—look these features over and you'll realize why the 720 cuts through Chicago regularly to New York, California, Canada and Texas stations, why it gives 10 K.C., selectivity and almost unbeatable DX.

Remember that S-M backs the 720 to the limit—assures you that you can't get more actual radio at twice the cost. And—S-M passes on to you right now the production savings of a big season, and prices the 720 kit at only \$72.50 complete, or \$102.00 custom-built with cabinet. For the kit, the new metal shielding cabinet is \$9.25 additional.

Better get your order in now—720's will be scarce as hen's teeth pretty soon, judging from present demand.

Did you ever see as much actual screen grid radio value for only \$72.50?

Here are the trimmest short wave sets ever—the new "Round-the-World" kits.

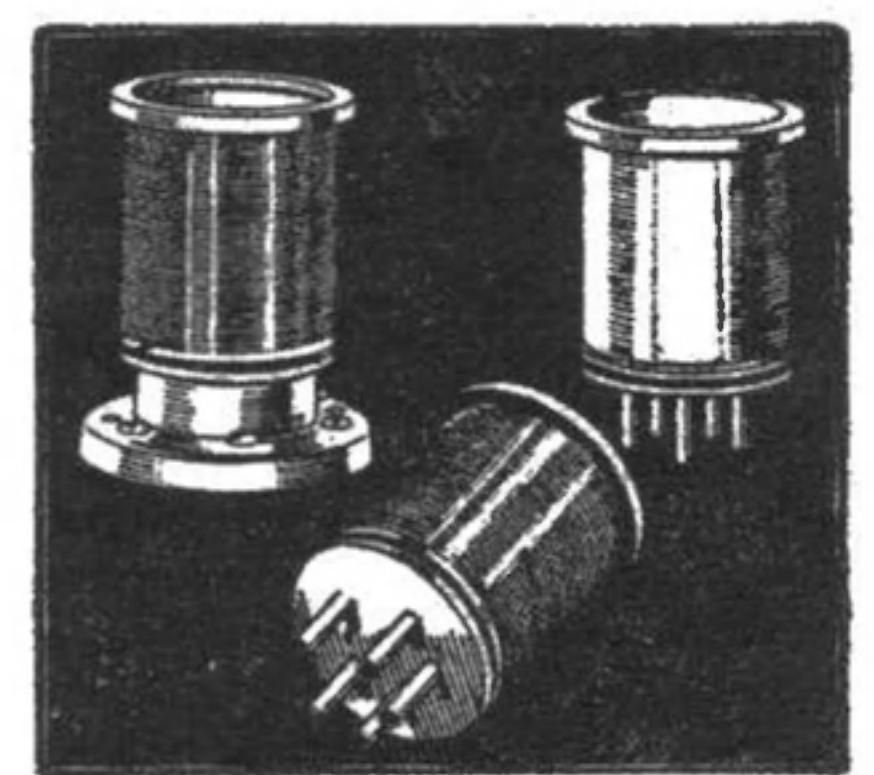

Tune Over the "Thrill Band" with an S-M Short Wave Set

HAVE you had your taste of the "thrill band"—the wavelength band from 17 to 200 meters? Down on these low waves are the foreign broadcasters—English 5SW with Colonial programs—Dutch, French, German and other rebroadcast programs. Down there you can hear KDKA, WGY, and WLW programs when static blankets out their regular waves. And television—the low wave band is its busy nursery. You can hear amateurs in almost every country, all in an evening—if you have an S-M "Round-the-World" short wave set. S-M "Round-the-World" kits build up into such neat, trim, snappy receivers—with screen grid R.F. amplification, and one dial tuning—that you just can't help getting the thrill of your life as you tune one.

The "Round-the-World Four" is a complete four-tube regenerative (non-radiating) short wave receiver kit with aluminum shielding cabinet. It has one screen grid R.F. stage, a regenerative, non-radiating detector, and two high-gain Clough audio stages. It tunes from 17.4 to 204 meters with four plug-in coils, and has brought in five continents in an evening. The kit is \$51.00, complete with cabinet, coils, and full instructions—ready for immediate shipment.

The 731 "Round-the-World" Adapter is the two-tube, R.F. amplifier and detector, less the two stage A.F. amplifier of the above set. With an adapter plug, it converts any set to long-distance short wave reception. Price, complete with cabinet and four coils (17.4 to 204 meters) \$36.00. The 732 "Round the World" Essential Kit contains the two tuning and tickler condensers, the four plug-in coils, coil socket, and three R.F. chokes, with full instructions for building a one, two, three or four tube short wave set. It costs but \$16.50 complete.

Choose any one of the three kits you prefer, and step out into the "thrill band"!

New 5-prong plug-in coils, for short and broadcast waves. Wound on forms of threaded, moulded bakelite.

Theory of Operation of the Screen Grid Tube

The Screen Grid Tube may be operated either as a screen grid amplifier or as a space-charge-grid-amplifier. In this country the popular use is as a screen grid amplifier.

The limitations of the popular 3 element tube, such as the 01A as an R. F. amplifier, is due to the relatively high grid to plate capacity. In the 4 element tube this capacity is but a fraction of that of the ordinary 01A type of tube due to the screening effect of the 4th element or grid screen.

For single stage R. F. amplification, shielding may often be omitted. In multi-stage amplifiers, however, shielding is both necessary and important.

Where a regenerative detector immediately follows the screen grid tube, full advantage of regeneration may be taken, due to the fact that the CeCo R. F. 22 Screen Grid Tube does not readily "spill over" into oscillation.

Auto transformer or tuned plate coupling may be employed to advantage with this tube, due to its high plate impedance.

Radio Tubes

THE extreme sensitivity of the Screen Grid Tube—due to its high voltage amplification—offers radio amateurs unusual opportunities for experimenting in the realms of high frequency reception.

The CeCo R.F. 22 Screen Grid Tube for battery operation has already demonstrated its unusual possibilities in short wave reception—ideally adapting itself as an R.F. amplifier in this type of circuit—due to its extremely low grid to plate capacity.

With the CeCo A.C. 22 the advantages of Screen Grid amplification can be availed of for A.C. operated circuits.

In these two types (as with all CeCo Tubes) their greater clarity, sensitivity and longer life is largely due to the exclusive CeCo process of evacuation.

CeCo Screen Grid Tubes and all other types, including "special purpose" tubes are sold by CeCo dealers everywhere. Write for a copy of interesting folder "Getting the Most Out of Your Radio."
